What are static files?

Faisal Memon

{LP} LearnProgramming academy

Static files

➢ JavaScript, CSS, and images are the backbone of modern websites.

➢ JavaScript is needed to add any dynamic behavior to the website. Java script is written in .js files .

➢ CSS is needed to beautify our web application. Simply writing HTML might result in raw web pages that won't look good. CSS is written in .css files.

➢ Images would be important since you might want to display some images to your users like banners and so on.

Best practices with static files

```
\authentication
    \static
        main.css
\store
    \static
        main.css
```

{LP} LearnProgramming
academy

Recommended Structure

```
\authentication
   \static
      \authentication
         main.css
\store
   \static
      \store
         main.css
```
